

Car Companies: Stop Your Huge Data Collection Programs

Mozilla's research has revealed that **popular global car brands — like Chevrolet, Nissan, Toyota, Kia, Audi, Jeep, Honda, Volkswagen, and more — are collecting your deeply personal data, like your genetic information and sexual activity.** This invasive harvesting of information is collected via a web of sensors, microphones, cameras and the phones, apps, and connected services you use in your vehicle.

****Update January 2025:** Volkswagen's data breach — in which the precise location data of around 800,000 cars was left vulnerable online — serves as another stark reminder of the real-life risks inherent to these huge and invasive data collection programs.

The more people who sign our petition right now while attention is on the issue, the more pressure we can build to get this technology regulated and removed. **Will you add your name to the petition now?**
